

STEEL CUTTING MACHINE

ATS

One of the main advantages of this vertical bandsaw is the cross-cut head with a wide throat capacity that allows cross cutting of large plates using a smaller blade than that of a tra- ditional horizontal bandsaw; therefore reducing blade costs. This can be achieved because the blade is cutting across the smallest cross-section; height rather than width.

The work table is equipped with heavy rollers that allow for easy movement and positioning of the material as required; saving operator time and costs. The AST is available in semi-automatic or fully automatic with shuttle.
